Many San Diegans are interested in taking advantage of the area's fantastic year-round sunny weather to save money and energy by converting to a solar energy system in their homes, but the expense of installing such a system may be a deterrent. San Diego Solar Power can help.

For a limited time, San Diego residents looking for an affordable way to convert to a solar power system in their homes can take advantage of an exciting new loan program. San Diego Solar Power is one of a few select companies offering a new solar/energy-efficiency program that will allow homeowners to finance their solar installations and energy efficiency improvement projects at a historically low rate of **3% fixed, with a 15-year term**.

This government program was designed to provide additional financing options for homeowners who may be interested in solar power but have not yet been able to qualify for a loan to cover installation costs. **There is no credit score requirement and the loan program does not require equity in the home.** Participants will also receive a minimum of \$2,950 in additional state rebates to make their homes more energy efficient and to offset installation and labor costs.

This program is designed to make energy-efficient power affordable to middle-income homeowners. Consequently, household income must not exceed \$120,000. Homeowners must also be current on mortgage and property taxes.

Funding for this new program is limited. If interested, contact San Diego Solar Power as soon as possible.

About San Diego Solar Power:

Making wise financial decisions requires the advice of an expert. Investing in solar power should be no different.

Since 2009, San Diego Solar Power has consulted with home and business owners regarding quote comparison, pricing and equipment, leasing and loan options, SDG&E rates, and the financial benefits of solar.

In 2011, San Diego Solar Power began selling systems directly through their qualified contractors. Their pre-negotiated, discounted rates include all installation costs. They use American-made SolarWorld panels and Enphase micro-inverters. Both carry an industry-leading 25-year guarantee.
